Research

Research area: ML Algorithms and Architectures.

Vision: I co-design novel algorithms and near-data processing architectures to accelerate dense retrieval and long-context inference. My long-term goal is to develop generalized and scalable architectures for Neural Memory Systems, expanding their capability, adaptability, and sustainability across diverse computing environments.

Education

Cornell University — **Ithaca, NY**
Ph.D. Electrical and Computer Engineering — *2024–2029*
Advisor: Mohammad Alian

University of Kansas — **Lawrence, KS**
B.S. Computer Science — *2018–2024*

Professional Experience

SEMRON — **Austin, TX**
Systems Architecture Research Intern — *Jan. 2026–July 2026*
- Led development of a unified full-stack simulation framework for SEMRON's capacitive in-memory-computing architecture, integrating functional and hardware models to support architecture exploration, compiler development, and cross-team evaluation.
- Drove cross-layer system-architecture research spanning hardware–software interfaces, ISA design, memory hierarchy and 3D integration, and LLM mapping and pipelining to guide scalable, energy-efficient inference.
